Once upon a time, those who promoted renewable energy were laughed at.

The [FT has reported that](#):

The UK has broken its record for wind power generation, as blustery conditions and a growing number of turbines enable renewable energy sources to provide more than half the country's electricity.

National Grid Electricity System Operator on Wednesday said the country had generated record wind-powered electricity at one point on Tuesday, with provisional data showing a "max wind generation record" exceeding 21.6 gigawatts. UK demand on Wednesday lunchtime was about 35GW.

Now they're blown away.

And this can only get better. There's little about which I say that at present.
